FENICS® announces the release of FENICS Dealing Engine

FENICS launches FENICS Professional 12.4 the latest version of its award winning FX Options platform

London, September 7, 2015 – FENICS®, the market leading provider of FX options software and workflow solutions, today announced the release of FENICS Professional™ 12.4, including FENICS Dealing Engine, delivering automation of client-specific price generation, distribution and execution. FENICS 12.4 is available for upgrade to all FENICS Professional subscribers.

FENICS Dealing Engine can be accessed via a new execution panel which allows sales teams to view quotes, time to expiry and the ability to execute and book trades. Alternatively the same functionality can be accessed via a Dealing API which can be interfaced with third party systems or proprietary platforms. The Dealing Settings screen is provided to allow traders and business managers to define and monitor dealing rules.

John Crisp, Director of Product, commented: “FENICS 12.4 has been built in close collaboration with several of our long term customers. This has been very beneficial in ensuring that the workflow and user experience meets the market’s needs. It was equally important to recognize that some customers would want to avoid increasing the number of platforms on their sales desks. The Dealing API gives our customers the choice to integrate the new dealing functionality into their existing systems.”

Mr. Crisp continued: “Already we have engaged in discussions where innovative ideas on how FENICS Dealing could be deployed; from powering client facing e-commerce platform, to rolling our Sales solutions across the region or on a global basis”.

Richard Brunt, Managing Director of FENICS, stated, “The feedback on FENICS 12.4 has been excellent and we have already secured a significant new client during the soft launch phase. It is essential that we build on this early success, continue to listen to the feedback from our clients and deliver the solutions they require”.

FENICS is used at over 350 client sites worldwide with thousands of end users from all across the financial markets benefiting from its solutions.
